

# Save Lives: Share Information

1

## Breast Cancer Risks Depend on Family History

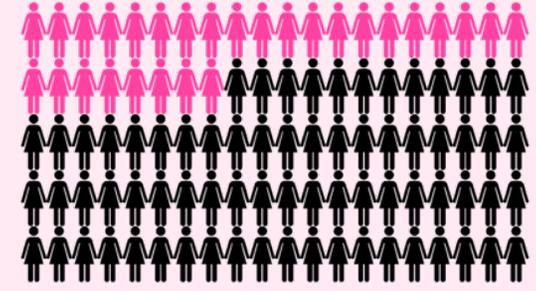

2

## Finding Cancer Early Improves Outcomes

When breast cancer is found early **98** out of 100 women survive

If cancer is found late (after it has spread) only **28** out of 100 women survive

3

## How to Find Breast Cancer Early

- Mammograms and breast MRIs are screening tools that can help catch breast cancer earlier when it is easier to treat
- Insurance usually covers screening costs
- For women with a family history of breast cancer, doctors often recommend:
  - Starting screening at a younger age
  - Screening more often than women at average risk

4

## Make a Plan

- Talk to your doctor about your family history of cancer
- Start breast screening as recommended by your doctor
